

MASTER FITTER ASSESSMENT – LVT

OVERVIEW OF PRACTICAL ASSESSMENT

Applicant will be required to install 4mm plywood to the fitting bay (approx. 5m²).

Applicant will be required to install 457mm x 300mm tiles 45° in brick bond incorporating a 3mm feature strip in the main field. The installation must also have an inset border made up of two 3 x 3mm (1 contrasting colour) feature strip widths (9mm). The installation will have an out-fill of approximately 100mm straight lay tile. Applicant to show own judgement on proportioning field. Applicants to mitre border to feature corner and fireplace and block corners to remaining areas without feature strip. The fitting bay will incorporate a low-level radiator, a fireplace and feature corner. The area must be treated as a “live installation”. All relevant pre-installation checks must be observed.

Applicant will be required to bring with them all tools necessary to complete the installation (to include all PPS and safety equipment)

All materials will be provided, however, applicant may supply own materials at the discretion of the assessor.
